Producer Workshop on Land & Stream Health to be held in Nemaha County on January 15, 2019

The Delaware River and Tuttle Creek Watershed Restoration and Protection Strategy (WRAPS) Programs will host a one-day producer workshop on January 15, 2019, at the Nemaha County Community Building in Seneca, KS. The workshop will feature nationally recognized soil health advocate Gail Fuller, who has been using regenerative soil health practices on his family farm near Emporia, KS, since the mid-1980's, and Phil Balch, Stream Specialist and principal of Wildhorse Riverworks, Inc., with over 30 years of experience working with landowners to design and implement streambank stabilization and rehabilitation projects. Other resource specialists and area producers will address related conservation topics including forestry, wildlife habitat and livestock management.

This workshop is a collaboration between the Delaware River and Tuttle Creek WRAPS, Glacial Hills RC&D, Kansas Forest Service, Kansas Department of Wildlife, Parks & Tourism, Kansas State University Research & Extension and the Kansas Department of Agriculture, Division of Conservation. There will be no charge to attend the workshop, but advance registration will be required. For more information contact Kerry Wedel, Delaware River WRAPS, 785-284-3422 or watershed@delawarewraps.com.
